

LED Denom Arrow

50% Energy Reduction... Lasts 30 Times Longer!!

K902-105

Replaces the five existing lamps in denom display panel. All yellow LEDs. Drop-in replacement of incandescent lamps in Gameking upright or I-Game machines. Operates on standard 13.5 volt system and is configured with connector that matches original design to make this a "plug and play" device. 3 easy steps: Remove lamps and sockets from the existing PCB, peel the double-sided tape from new board, and press new board in place over old board. Plug board in.
